

**DRAFT**  
**A Bill to Prevent the Requirement of Vaccination  
and Proof of Vaccination,  
for any Purpose Whatsoever,  
by any Government, Commercial or Private Entity,  
and to Prevent any Related Discrimination**

*Her Majesty, by an act with the advice and consent of the Senate and House of Commons of  
Canada, enacts as follows:*

**In view of the fact that even Canada’s own Chief Science Advisor has stated that “it has not  
been directly established yet whether vaccinated individuals become the equivalent of  
asymptomatic carriers who can continue to infect others.” And that there continues to be  
“uncertainty regarding their (vaccines) efficacy against the different virus strains spread across  
the globe, among others.”<sup>1</sup>**

*And, Whereas,*

The use of the PCR test, which is still used in Canada to determine COVID cases and which has formed the entire basis of this global pandemic, has now been “pulled off the shelf” by the CDC as it has proved unreliable as a means of detecting a transmittable, infectious virus, and there is mounting proof that the numbers of cases generated by the PCR tests during this pandemic were in many cases up to 97% false positives in countries around the world and here in Canada (depending on the number of cycle thresholds used);<sup>2 3 4</sup>

*And, Whereas,*

Studies continue to demonstrate that the vaccines have not proven effective in preventing transmission of infection, and as these injections have only been granted “Interim Authorization” in Canada;<sup>5 6</sup>

*And, Whereas,*

Covid Variants such as DELTA andOMICRON are now occurring as much in fully vaccinated individuals as in unvaccinated individuals: “CDC expects that anyone with Omicron infection can spread the virus to others, even if they are vaccinated;”<sup>7 8 9 10</sup>

*And, Whereas,*

10 <https://covid-19.ontario.ca/data/long-term-care-homes>

It has been determined that over 80% of Covid deaths occurred in the elderly & infirm, who had two or more co-morbidity factors;<sup>11</sup> and that most people have a COVID-19 survival rate of approximately 99.8% with Infection Fatality Rates (IFR) that are comparable to seasonal flus;<sup>12 13 14</sup>

*And, Whereas,*

There have been, as of Jan. 14th 2022, over 31,000 total reported deaths, and about 3 million “adverse events,” and “adverse reports” reported to VAERS (the US Govt. run Vaccine Adverse Event Reporting System); and over 36,000 deaths and 3 million injuries reported through Eudravigilance (the European Medicines Agency reporting system) through Jan. 1 2022<sup>15</sup> that have been directly associated with the various COVID injections. VAERS is a passive reporting system, meaning, it is voluntary to report adverse events or deaths. A Harvard Pilgrim Health Care Study<sup>16</sup> concluded that, “Adverse events from vaccines are common but underreported, with less than one percent reported to the Food and Drug Administration (FDA). Low reporting rates preclude or delay the identification of “problem” vaccines, potentially endangering the health of the public.”<sup>17</sup>

*And, Whereas,*

There are no long-term non-industry funded studies that examine possible health effects of these injections called vaccines, and as the FDA’s own data shows that serious harm such as auto-immune disease, inflammation of the heart and brain, stroke, convulsions, and death can occur after vaccination.<sup>18</sup> The CDC is providing updates but the lack of long-term studies is disturbing when we’re doing a mass roll out of COVID-19 vaccines to the population, including our children;<sup>19</sup>

*And, Whereas,*

There are many medical treatments other than COVID-19 vaccines, that have proven effective in saving the lives of COVID-19 patients and minimizing the risk of hospitalization such as Ivermectin and Hydroxychloroquine.<sup>20</sup> And in light of the fact that there are many options available that effectively boost people’s immune systems naturally and without the kind of risk inherent in these experimental COVID-19 vaccines,<sup>21 22</sup> and that people's immune systems have evolved over millennia, and most are able to effectively counter viral infections naturally;

*And, Whereas,*

Companies such as Pfizer with the FDA have attempted to hide their vaccine trial data for 75 years indicating that there are serious problems with the vaccine,<sup>23 24</sup> and vaccine manufacturers have been granted total immunity from liability should vaccine injury or death occur after vaccination;<sup>25</sup>

*And, Whereas,*

These vaccines are still in clinical trial stages, meaning they are not fully approved. In Canada the COVID-19 vaccines have “Interim Use” authorization with terms and conditions, in the USA the vaccines have “Emergency Use” authorization;<sup>26 27</sup>

The Doctors for Covid Ethics in Europe state that “the approval of the COVID-19 vaccines by the EMA was premature and reckless, and that the administration of the vaccines constituted and still does constitute ‘human experimentation’, which was and still is in violation of the Nuremberg Code.”<sup>28</sup>

*And, Whereas,*

Canadians have been forced into taking experimental COVID-19 vaccines in order to keep their jobs, travel, go to school, play sports, go to the gym, theatre or other events, and the Nuremberg Code states that human beings must have “free power of choice, without the intervention of any element of force, fraud, deceit, duress, overreaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision.”<sup>29</sup>

*And Whereas,*

Canada has heretofore always been considered a free and democratic nation whose Canadian Bill of Rights secures “the right of the individual to life, liberty, security of the person, and the right not to be deprived thereof except by due process of law.”<sup>30</sup>

*And, Whereas,*

There are currently 20 separate court cases pending in Canada many of which seek to determine whether fraud and deceit have played a role in the management of the COVID pandemic including the use of the PCR test which was used to determine COVID cases and which forms the entire basis of this global pandemic. Many of these court cases are being held up in the judicial system allowing for the continued obliteration of individuals rights and abuses to Canadians;<sup>31</sup>

*Add Whereas,*

The content and references of this Bill show that the vaccines have proven ineffective in preventing infection, maintaining an antibody response, preventing hospitalization and deaths of the vaccinated, and that these injections have actually caused much harm themselves, including death to hundreds of thousands of humans world-wide – see compendium of over 1,000 peer reviewed studies questioning the safety of Covid-19 vaccines;<sup>32</sup>

## 3. ADDITIONAL REFERENCES

Suppression of science that is not in lockstep with the way government and media has portrayed the pandemic to the public, has reached unprecedented levels as Big Tech and news purveyors decide which doctors, scientists, and expert's voices are allowed to be heard and which are cancelled and labelled "misinformation" or "false news". Most of the world's media is directly or indirectly linked to 2 or 3 powerful corporate interests – Vanguard and Blackrock – which also have numerous shares and ties to the pharmaceutical industry.

(<https://www.stopworldcontrol.com/monopoly/>). Funding of Fact Checkers by pharmaceutical interests further tightens the grip on any information we may find that questions this narrative. Here are links to information you may not have had access to:

## PCR & RELATED

Because the entire pandemic was proclaimed based on the numbers of largely PCR derived COVID-19 cases and deaths, it is critical to learn that case numbers and deaths may have been vastly inflated to promote the idea that the world is in peril from the virus and that the only solution lies in mass vaccination with a heretofore never approved for human use vaccine. It is estimated by numerous experts that up to 97% false positives were achieved by increasing the number of cycle thresholds (or amplification) used by the labs conducting the tests.
