

October 21, 2022

Dear College of Physicians and Surgeons of Ontario - Open Letter -

I believe you wish me to respond to why I, Dr. Christopher Shoemaker, continue to speak out in certain public settings and videos.

Response Section 1

From the Files of Dr. Paul Alexander PhD, 15 October 2022

Injecting Children with the mRNA COVID Gene Injection or Any of the COVID Injections Can be **Very Damaging to Their Developing Innate Immune System**

<https://www.trialsitenews.com/a/injecting-children-with-the-mrna-covid-gene-injection-or-any-of-the-covid-injections-can-be-very-damaging-to-their-developing-innate-immune-system-1ed1a4cd>

Thank you for your careful review of the above. I certainly have reviewed it carefully. It forms part of why I vigorously oppose Immune-damaging Bioinjections for minors and adolescents.

Physicians are encouraged to study and comment on scientific papers throughout their lifetime. I am simply doing that in this not so simple era.

I speak to the protection of humanity as per my Oath to Hippocrates and to human safety. I am sure you regularly do the same.

It is my analysis that the Scientific opinions of Dr. Bhakdi, Dr. Alexander, Dr. Bridle and Dr. Geert Vanden Bossche are above all others in this scientific field. **They** are the informed and appropriately careful ones.

Response Section 2

All of the videos or public speeches that you are assessing are dated after April 14, 2022.

It was on that date that I wrote in confidence to my Registrar of my Medical College of which I am a career-long devoted member.

I offered in that letter (**Attachment-30 pages**) to meet privately or in Committee with the Registrar to assist the finding of a common ground that could more rationally promote the long-term health of our province, as well as ethical and informed decisions for individual doctors and their patients.

(Please see importantly pages 1 to 3 of this attachment which outlined a realistic 'Exit from Covid' Strategy.)

This offer of mutual discussion was rejected by my Registrar by her providing NO ANSWER whatsoever to my letter.

A licensed College member writing in good conscience with a sincere idea to his College in April 2022 and receiving no acknowledgement during a globe-altering pandemic

And so with confidential conversations rejected for over 5 months by yourselves at the CPSO, I have no means other than public discourse to let all in the public know that there has always been a safe way forward that we in Canada have not taken.

It is still not too late for the College of Physicians and Surgeons of Ontario to do the right thing.

I therefore include as my final attachment a 7 page Open Letter to Health Canada, PHAC and NACI which was authored by Ms. Karen Rucas and myself in September and which by distribution to you here today is now an Open Letter to the CPSO and all Physician Colleges of Canada.

I sincerely ask you to ponder the glaring differences (page 4) between what is considered good medical science 'on balance' in Denmark, Japan, India, Africa and Brazil compared to that of Canada and the U.S.

All of Europe and here too in Canada and the U.S. we must now look to the 2022 EuroMOMO Paediatric Mortality data on page 7 of the same Open Letter.

** Child death rates and vaccine injury rates post vaccination are astronomical compared to any other vaccine in human history **.

Please speak out with us - not against us - in this struggle to heal our countries' health.

Ivermectin supported by every College of Physicians and Surgeons in Canada before November 1 2022 is a worthy goal.

Yours most sincerely,

Christopher Shoemaker M.D. CCFP
